PROFESSIONAL ENGINEERS (P.E.)

Risk Engineer

Provide integrity engineering support related to the maintenance and operation of liquid pipelines. Evaluate pipeline and equipment defects, designs, procedures, third party encroachments, and integrity related events. Develop subsequent integrity related projects or administrative processes to prevent spills. Manage projects through all phases of estimating, engineering design, and construction. Promote/educate Pipeline Integrity Best Practices with other Company groups to ensure designs incorporate company standards and integrity best practices for risk minimization. Knowledge of pipeline industry codes and standards is preferred. **Job Requirements:** Experience in Pipeline and/or Terminal Construction and Engineering preferred. Job tasks include being self-sufficient in duties, working well with other team members, accepting and considering input from others, and possessing good communication skills, both written and verbal. This position must embrace diversity, communicate clearly, act objectively, be committed to optimal efficiency, and embrace continuous improvement. The ability to communicate effectively orally and in writing in English with co-workers, supervisors, internal and external customers; the ability to work in stressful conditions; the ability to adapt and respond in changing circumstances; the ability to use a personal computer with the Windows(R) operating system to complete time sheets, send and receive email, and access information posted on the Company's intranet; availability as needed to work on both a scheduled and call-out basis; and the ability to work at the assigned job site. The above statements are intended to describe the general nature and level of work being performed by employees assigned to this job. They are not intended to be an exhaustive list of all responsibilities, duties, skills, or working conditions.
